Management Information Systems - Management Information Systems by GreggU 27,297 views 3 years ago 13 minutes, 21 seconds - Organizations use computers and **information systems**, to reduce costs and gain a competitive advantage in the marketplace.

Intro

PDA Many workers are now telecommuters who perform their jobs at home, and others often use their personal digital assistants (PDAs) to conduct business while on the go.

Information literacy, on the other hand, is under-standing the role of information in generating and using business intelligence.

**HARDWARE** The hardware components include input, output, and memory devices and vary depending on the application and the organization.

**PROCESSES** Processes are usually methods for performing a task in an MIS application.

**DATA** The data component of an information system is considered the input to the system.

**FUTURE DATA** In addition, future data is predicted for budgets or cash flow reports.

**AGGREGATED** Aggregated data can be useful for reporting over- all performance during a particular sales quarter, for example, but it limits the ability of decision makers to focus on specific factors.

**GOALS** If an organization has defined its strategic goals, objectives, and critical success factors, then structuring the data component to define what type of data is collected and in what form is usually easy.

**RELEVANT DATA** A database, the heart of an information system, is a collection of all relevant data organized in a series of integrated files.

**DATABASE** A comprehensive database is essential for the success of any information system.

**REDUCING TIME** Databases are also important for reducing personnel time needed to gather, process, and interpret data manually.

**DECISION MAKING** The purpose of an information system's process component is generating the most useful type of information for making decisions.

The quality of information is determined by its usefulness to users, and its usefulness determines the success of an information system.

**INSIGHTS** If information lacks any of these qualities, the results are incorrect decisions, misallocation of resources, and overlooked windows of opportunity.

**HRIS** A personnel information system (PIS) or human resource information system (HRIS) is designed to

provide information that helps decision makers in personnel carry out their tasks more effectively.

**DECISIONS** • Choosing the best job candidate • Scheduling and assigning employees • Predicting future personnel needs • Providing statistics on employee demographics • Allocating human and financial resources  
The goal of a financial information system (FIS) is to provide information to financial executives in a timely manner.

**STRATEGIES** Information systems can help organizations reduce the cost of products and services and, if designed correctly, they can assist with differentiation and focus strategies.

**EXECUTIVES** The top information systems job belongs to either the chief technology officer (CTO) or the chief information officer (CIO).

**IMPLEMENTATION** This person is responsible for the design and implementation of information systems.

**NETWORK** This person oversees a company's internal and external network systems, designing and implementing network systems that deliver correct information to the right decision maker in a timely manner.

**ADMINISTRATOR** A database administrator (DBA) is responsible for data-base design and implementation. Additionally, a database administrator should have knowledge and understanding of data warehouses and data-mining tools.

**PROGRAMMER** A computer programmer writes computer programs or software segments that allow the information system to perform a specific task.

Types of Information Systems (TPS, MIS, and DSS) - Types of Information Systems (TPS, MIS, and DSS) by 5-Minute Lessons by Victor 144,113 views 2 years ago 9 minutes, 31 seconds - In this video, we will learn the most common types of **information systems**, used in different levels of an organization, which are as ...
