The Place of Information Technology in Management and Business Education

The power of modern information systems and information technology (ISIIT) offers new opportunities to rethink, at the broadest levels, existing business strategies, approaches and practices. Over the past decade, IT has opened up new business opportunities, led to the development of new strategic IS and challenged all managers and users of ISIIT to devise new ways to make better use of information. Yet this era which began with much confidence and optimism is now suffering under a legacy of systems that are increasingly failing to meet business needs, and lasting fixes are proving costly and difficult to implement. General management is experiencing a crisis of confidence in their IS functions and in the chief information systems officers who lead them (Earl and Feeney, 1994:11). The concern for chief executive officers is that they are confronting a situation that is seemingly out of control. They are asking, 'What is the best way to rein in these problems and effectively assess IS performance? Further, how can we be certain that IS is adequately adding value to the organisational bottom line?' On the other hand, IS executives and professionals who are responsible for creating, managing and maintaining the organisation's systems are worried about the preparedness of general managers to cope with the growth in new technologies and systems. They see IT having a polarising effect on general managers; it either bedazzles or frightens them (Davenport, 1994: 119).

Essentials of Management Information Systems

Exceptionally practical in approach, this book prepares learners for the constantly changing demands of using information systems as managers in today's fast-paced organizations--first by relating MIS to management, the organization and technology, focusing on the importance of integrating these elements; second by tracking emerging technologies and organizational trends; and third by consistently using examples taken from real businesses, both domestic and foreign. A four-part organization covers organizations, management and the networked enterprise; information technology infrastructure; management and organizational support systems for the digital firm; and building information systems in the digital firm. For business managers in the 21st century.

Essentials of Management Information Systems

Management Information Systems provides comprehensive and integrative coverage of essential new technologies, information system applications, and their impact on business models and managerial decision-making in an exciting and interactive manner. Modernizing Academic Teaching and Research in Business and Economics

Technical developments continue to enable great change in organisations. Securing the benefits, however, requires more than technology; it requires a coherent approach to organisational and strategic issues. This book draws on both academic research and current practice to present a distinctively organisational perspective on the management of computer-based information systems. This second edition of *Managing Information Systems* maintains a four-part framework and a range of valuable pedagogical features to encourage active learning. In brief, it provides: An organisational perspective to elicit discussion from a strategic and managerial position Analysis of recent developments in areas such as the integration of CRM, ERP and related systems A recurring Chapter Case to explore connections between theories or models and current practice Activity and MIS in Practice features to promote critical reflection and encourage further research The book is intended for those who are studying information systems as part of a management degree on undergraduate, MBA or similar postgraduate courses. David Boddy is a Research Fellow at the School of Business and Management, University of Glasgow. He is author of two other books published by Pearson Education: *Management: An Introduction* (2002) and *Managing Projects* (2002). Albert Boonstra is a lecturer and researcher at the University of Groningen, the Netherlands. As well as teaching undergraduate and MBA students, he also consults for many organisations on the management of information systems. Graham Kennedy works in the change management department of the Royal Bank of Scotland and has over 20 years of experience of applying information technology to achieve business benefits.
